

Parameters

```
In[1]:= width = 60; thickness = 0.15; density = 0.3; modulus = 30 000; load = 66;
```

Intermediates

$$\text{leng} = \sqrt{\left(\frac{\text{width}}{2}\right)^2 + \text{height}^2};$$

```
In[3]:= area = π * diameter * thickness;
```

$$\text{iovera} = \frac{\text{diameter}^2 + \text{thickness}^2}{8};$$

$$\text{stress} = \frac{\text{load} * \text{leng}}{2 * \text{area} * \text{height}};$$

$$\text{buckling} = \frac{\pi^2 * \text{modulus} * \text{iovera}}{\text{leng}^2};$$

$$\text{deflection} = \frac{\text{load} * \text{leng}^3}{2 * \text{modulus} * \text{area} * \text{height}^2};$$

Equations

```
In[8]:= weight = 2 * density * area * leng;
```

Optimization

```
In[9]:= Timing @
```

```
FindMinimum[{weight, weight ≤ 24, stress ≤ 100, stress ≤ buckling, deflection ≤ 0.25`,
10 ≤ height ≤ 50, 1 ≤ diameter ≤ 4}, {{height, 10}, {diameter, 3}}]
```

```
Out[9]= {0.078001, {15.8683, {height → 14.2149, diameter → 1.69057}}}
```

Graphics

```
In[10]:= p1 = RegionPlot[stress ≤ 100 && deflection ≤ 0.25 && stress - buckling ≤ 0,
{height, 10, 30}, {diameter, 1, 2.8}, Frame → True,
FrameLabel → {"Height", "Diameter"}];
```

```
In[11]:= p2 = ContourPlot[weight, {height, 10, 30},
{diameter, 1, 2.8}, ContourShading → None, ContourLabels → All];
```

```
In[12]:= Show[p1, p2]
```
